

SPEAKERS AND INDUSTRIAL INTERCOMS

Speakers and intercoms are installed in large spaces such as factories, retail stores, and warehouses to allow employees to report alerts and send announcements.

Commercial intercoms and speakers can be used with other communication devices such as video-intercom accessories, PA systems and speakers, portable communication devices such as megaphones and wireless telephone booths to enhance communication between personnel in large indoor and outdoor facilities.

AudioMaster® and Atkinson Dynamic Intercoms are engineered to deliver dependable performance, maximum flexibility and extended service life under the harshest conditions.

The modular design enables you to specify a system with an unlimited number of stations, to customize a system for the variety of environments within your facility and to expand your system in the future.
